Summary

Computer Science graduate with hands-on experience in Python, Machine Learning, and full-stack web development. Skilled in Django, REST APIs, React, and data analysis with Pandas, NumPy, and TensorFlow, with practical experience building and evaluating ML models on real-world datasets. Passionate about problem solving, clean software engineering, and building data-driven, scalable applications.

Education

Bachelors of Technology 2021 – 2025 | Chennai, India
Bharath Institute of Higher Education and Research - BIHER
- Computer Science Engineering | CGPA - 8.5/10

Skills

Frontend: HTML, CSS, JavaScript, React, Bootstrap
Programming: Python, Java
Databases: PostgreSQL, MongoDB
Backend: Django, REST APIs
AI/ML: Supervised/unsupervised ML, AI, model training & evaluation, AI Pair programming
Libraries: Pandas, NumPy, Matplotlib, TensorFlow, FastAPI
Developer Tools: Power BI, Git, GitHub, Docker, AWS(basic), Linux, VS Code, Jupyter, Eclipse

Experience

Python Intern
Edunet Solutions, Remote *Tools Used: Python, Pandas, NumPy, Scikit-learn*

- Built Machine Learning models on historical patient records, handling missing data and using proper train-test splits and cross-validation. Estimated risk of disease from symptoms and trends in the past.
- Clean noisy and inconsistent real-world datasets and applied feature scaling and outlier treatment to improve and stabilize performance.

Projects

AI Data Processor / *Python, FastAPI, Pydantic* GitHub

- Developed a FastAPI-based RESTful API for text ingestion, computational processing, and insight generation via automated key-term extraction and analytical evaluation. Implemented a modular architecture separating ingestion, processing, and analytics components, supported by in-memory data storage.
- Implemented Pydantic-based schema validation to ensure data integrity and interface robustness, and produced comprehensive end-to-end API documentation illustrating full-stack API design and data pipeline implementation patterns.

Dog Breed Identification / *Python, TensorFlow, Django, JavaScript, Power BI* GitHub

- Built TensorFlow image classifier for dog-breed recognition, handling preprocessing/augmentation with Pandas and NumPy and visualizing metrics in Matplotlib. Trained in 10k images, achieving 96% accuracy.
- Built a responsive HTML/CSS/JavaScript web app with a Django backend for image uploads, preprocessing, TensorFlow inference, and real-time breed classification with confidence scores.
- Developed Power BI dashboards to quantitatively evaluate prediction outcomes, including breed-class distribution, temporal trends of the confidence score, and model performance indicators.

Docker Based Data Ingestion Tool / *Java, Docker, JUnit* GitHub

- Built a Java directive to aggregate byte sizes and time durations in real time via ExecutorContext.
- Created reusable, case-insensitive ByteSize and TimeDuration Token utilities for unit conversion and parsing. The code was merged into the official codebase with 100% test coverage using JUnit and TestingRig.

Achievements & Certifications

Machine Learning (IBM)
- Developed a strong understanding of supervised and unsupervised learning, investigated when to apply different machine learning models and gained experience building and evaluating ML models across the full workflow.

SAP Joule for Consultants (SAP)
- Built practical knowledge and training in Cloud Migration, Generative AI and AI-led consulting, obtaining direct experience with enterprise transformation processes and intelligent business solution design.

- Achieved 70k rank in LeetCode, solved ~800 problems and earned badges - *Architecture Builder* for System Designing and *Data Navigator* for DBMS.
